## 1.Introduction

---

### 1.1 Browser tool and address for CMC service part information system.

We recommend you use Microsoft Explorer to visit the website and set your screen dpi = 1024X768. The website address:

<http://61.57.240.36/home/home.htm>.

### 1.2 About the CMC Service Part Information System help manual

This help manual describes many different functions of CMC Service Part Information System. Doing a query on CMC Service Part Information System is easy.

With CMC Service Part Information System you can get the information:

- Model code
- Part number
- Part name
- Replacement/Supersede part information

### 1.3 The structure of the CMC Service Part Information System Help manual

This Help manual is structured as follows:

The chapter entitled "Glossary" explains some of the terms associated with query.

The chapter entitled "Basics of query" tell you the basic way of use website system.

The chapter entitled "Advance of query" tell you how to use website system particularly.

The chapter entitled "FAQs" : Here you will find the answers to frequently asked questions.

The chapter entitled "Index" provides Main group illustration index and Group number indexes

## 2. Glossary

---

### **Part Number**

Every service part has a number which used to order part or management. Part number was the combination of English letters and numbers. For example, “CW754212” is a standard service part number.

### **Part Name**

Part name is useful information. It tells about the character of the part. Sometimes it also tells you where it installed. For example, if you find a part name like this” RAIL RR ROOF INR” . With this part name, you can easy to realize that this part is a rail and install in the backward of roof.

### **Model Code**

Although the same model serial vehicle (EX:CP/CPX/CM···) looks similar, there are still some different between themselves. A model serial vehicle was divided to several Model codes. Model code is symbolized the type of car. For example,” C101S” is pick-up and “C321U” is a van. The different of Model code is not only stand for the different type it also means the different equipment of the vehicle. Model code is also an important information It can prevent you to get wrong number and save you time in using website system. You can through the “engine number” to check the Model Code by website system.

### **Main Group &Sub Group**

Approximately, the entire service parts of the vehicle are divided to several big groups. These big group is called “Main Group” . For example:” 11” is usually stand for the engine. If you want to find a part installed in engine, you will know your first step will begins in main group 11. If you know main group, you will have a good direction to find a correct part number. The sub group is divided from main group. Sub group is a detail classification.

## **PNC**

PNC is the abbreviation of Part Name Code. In the illustration of website or part catalogue, there are a lots number to mark part. These numbers we called “PNC”. PNC is very useful, because every PNC stands for a unique part in a vehicle. Every PNC stands for the part name and rough installation position. If you know PNC, you can precisely find the part you want to.

## **Replacement/Supersede part information**

Replacement/Supersede part information tells us about the new service part. Change parts may be compatible or not. If a new part can replace an old one, it is called a replacement part.

## **Parts Catalogue**

PART CATALOGUE is showing part numbers and illustrations. Now we computerize the part catalogue into website system.

## **PB**

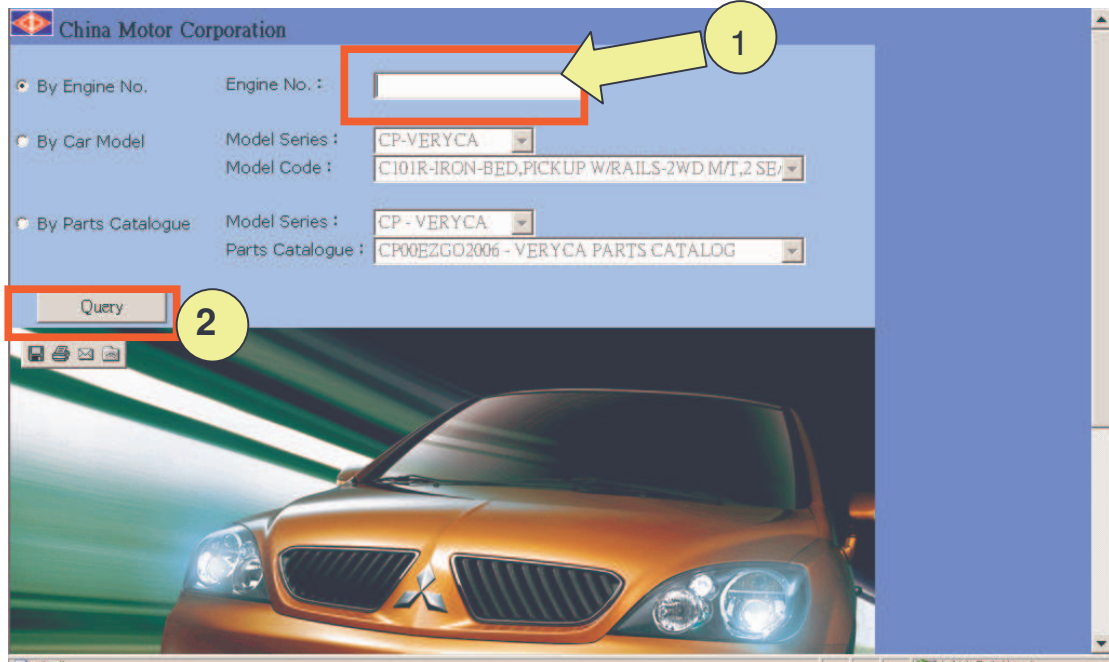

PB is the abbreviation of “part bulletin” . PB is the news about new service part. You will be received it by e-mail.

### 3. Basics of query

#### 3.1

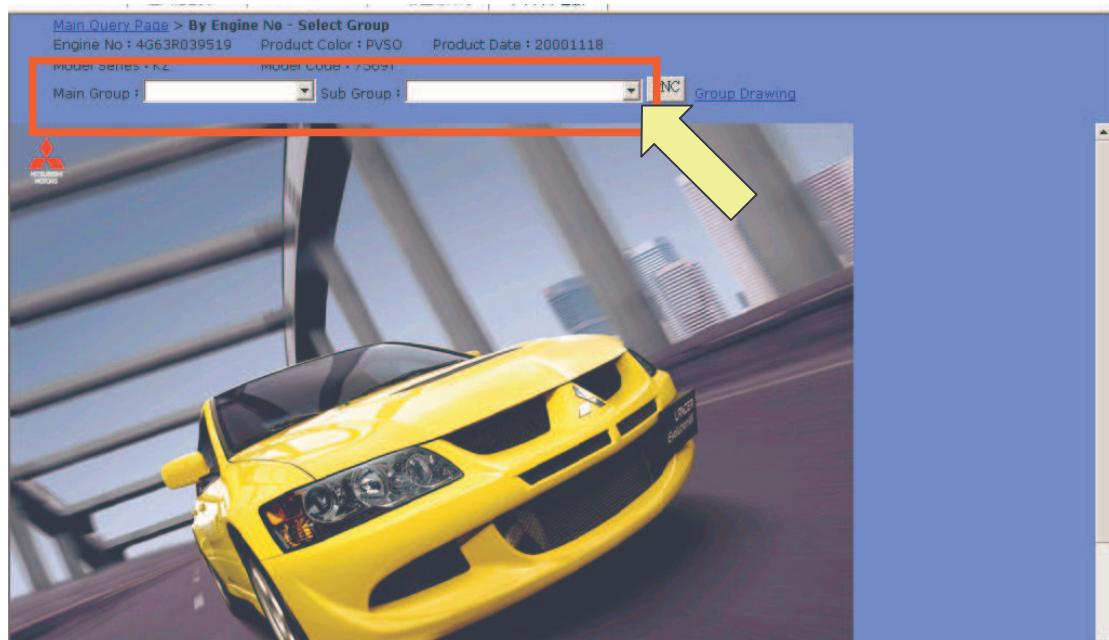

To enter a query, type in engine number into Engine NO query box.

*Attention: all letters of engine number must in **capitalization**.*

#### 3.2

Now press the ENTER key or click on the "By Engine No" button to view your query results, which include Product Color, Model series, and Model Code.

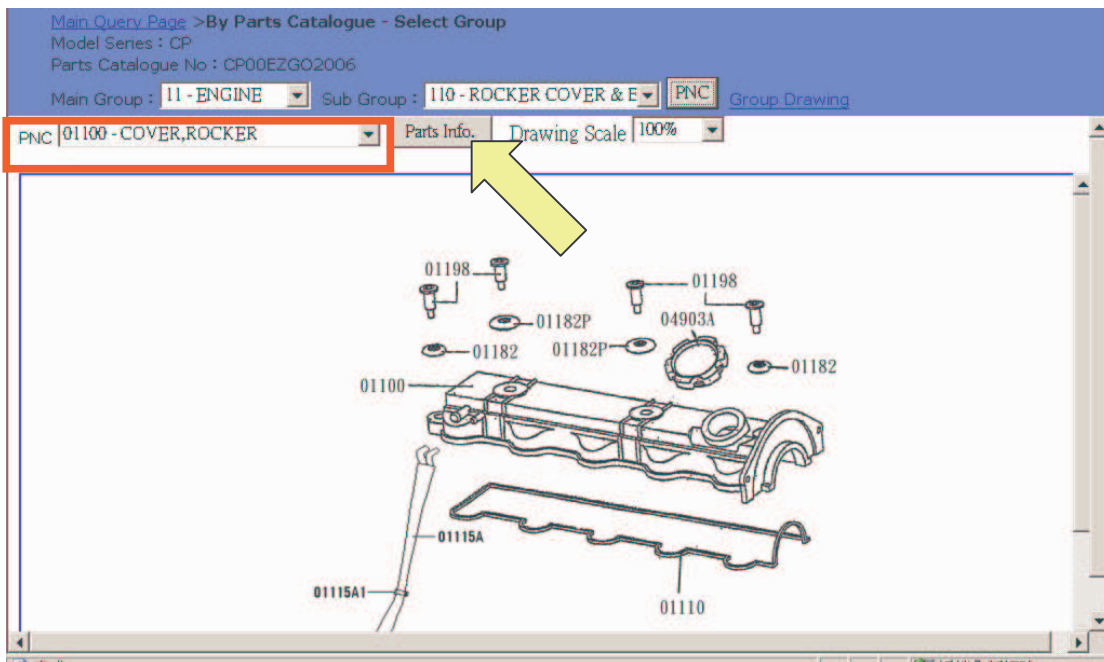

### 3.3

Now, by drawing the entitled “Main group” and “Sub Group” scrolls to choose where you want. Then, click on the “PNC” button to view your query results.

### 3.4

Now, you can draw the entitled "PNC" scroll and choose PNC. Then, click on the "Parts info." button.

### 3.5

The results page is full of information. Your query results page is packed with information. Here's a quick guide to decoding it. Here's a sample search results page, along with brief explanations of the various types of information about your search results that you can find there.

The screenshot shows a search results page with the following information:

- Model Series : KZ (A)
- Parts Catalogue No : KZ00VSM02004 (E)
- Group No : 11 110 (B)
- PNC No : 01100 PNC Name : COVER,ROCKER (F)

Parts No	KD	QTY	From	To	Model Code	Replacement Parts No	Remark
MD362612	K	1.0	20031015	99991230	KZ7581D		
MD362612	K	1.0	20040109	99991230	KZ7582D		

Annotations for the table:

- D: Points to the 'Parts No' column header.
- M: Points to the 'Parts No' cell in the first row.
- L: Points to the 'KD' cell in the first row.
- K: Points to the 'QTY' cell in the first row.
- J: Points to the 'From' cell in the first row.
- G: Points to the 'To' cell in the first row.
- H: Points to the 'Model Code' cell in the first row.
- I: Points to the 'Replacement Parts No' cell in the first row.

#### A. Model Series

This field shows the short code of the vehicle. For example, CP stands for VERYCA. So we call the CP is a model series.

#### B. Group No

This field shows main group number and sub group number.

#### C. PNC No

This field shows the PNC number you choose form the PNC scroll.

#### D. Parts No

This field shows the numbers of part used in the vehicle.

#### E. Part Catalogue No

This field provides the information of part catalogue. In here part catalogue number can be found.

#### F. PNC Name

This field shows the name used to associate the PNC.

**G. Model Code**

This field shows the part application of model code.

**H. Replacement Parts No**

If the part was cancelled, or could not be supply. This field will show another part number to help you in ordering business.

**I. Remark**

This field gives the following additional information because the reader may not be able to identify the parts number from the production period, model, and application alone.

**J. To**

This field shows the start date about part. When you pick up a part number, you have make the product date fit this column date. For sure the part numbers you picked are right.

**K. From**

This field shows the end date about part. Notice this date, it shows the part whether keep going supply or not.

**L. QTY**

This field gives the numbers of parts to be used.

**M. KD**

This field shows the place of production.

## 4. Advance of query

---

There are three ways of query method in website system. It's according to engine number, model code, and parts catalogue to begin query work.

### 4.1

Applied conditions:

- **According to engine number:** it's primary that you have engine number.
- **According to model code & parts catalogue:** if you don't know engine number but you know the vehicle model serial and model code.

### 4.2

there are three items can be chosen, but only one of them can be chosen each time(see PIC 1) :

#### 4.2.1

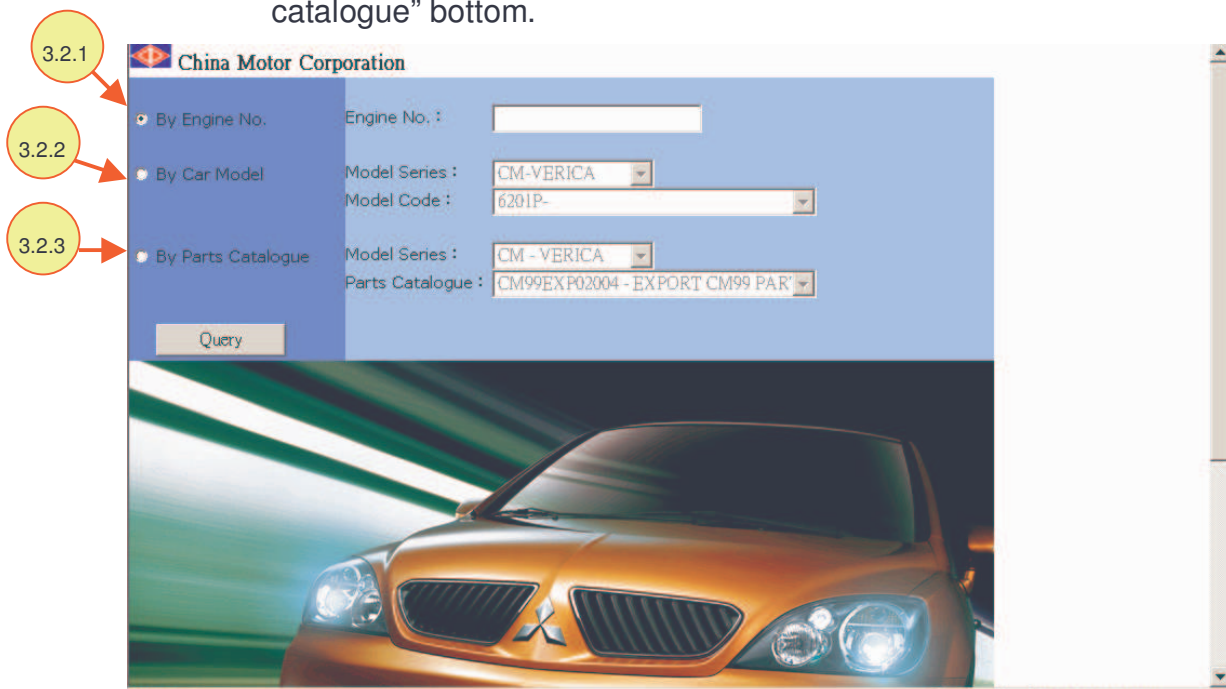

Enter engine number, click on "By engine number" bottom.

#### 4.2.2

Draw the scroll of "model code", then click on "By model code" bottom.

#### 4.2.3

Draw the scroll of "parts catalogue", then click on "By parts catalogue" bottom.

PIC 1

### 4.3

Choosing proper main Group and sub group :

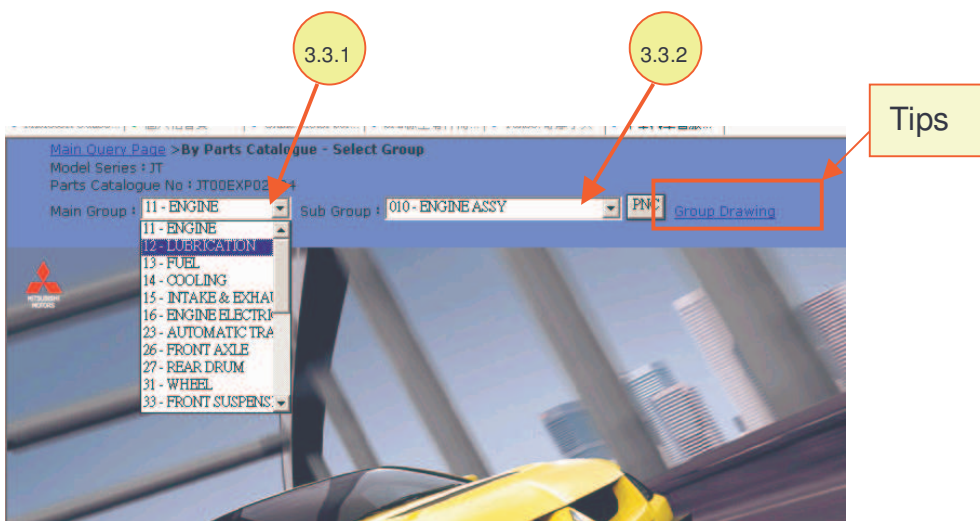

#### 4.3.1

Draw the scroll of “Main Group”.

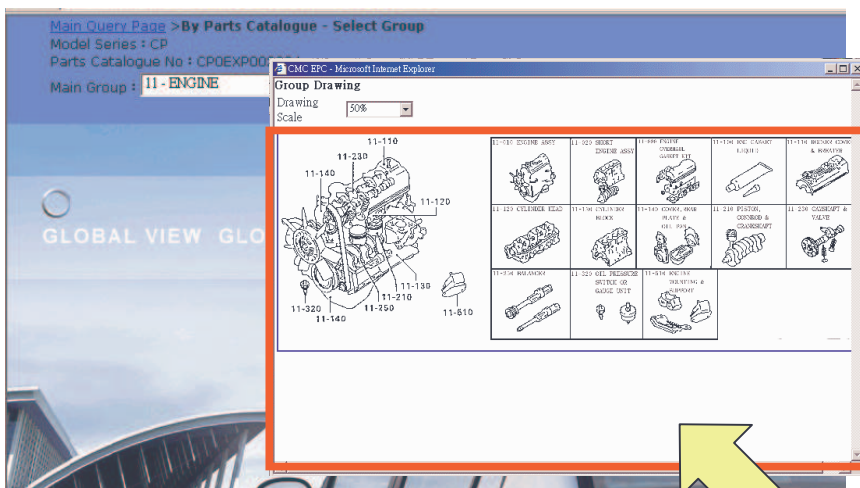

**Tips:** click on “Group Drawing”(see PIC. 2). Group Drawing can help you understand the sub group. Of course, if you are familiar with the sub group, you can dismiss picking this item.

#### 4.3.2

Draw the scroll of “Sub Group”, click on the “PNC” bottom.

PIC 2

PIC 3

GROUP DRAWING

## 4.4

Choose PNC that you want :

### 4.4.1

Draw the scroll of “PNC”, choosing PNC number that you want.

### 4.4.2

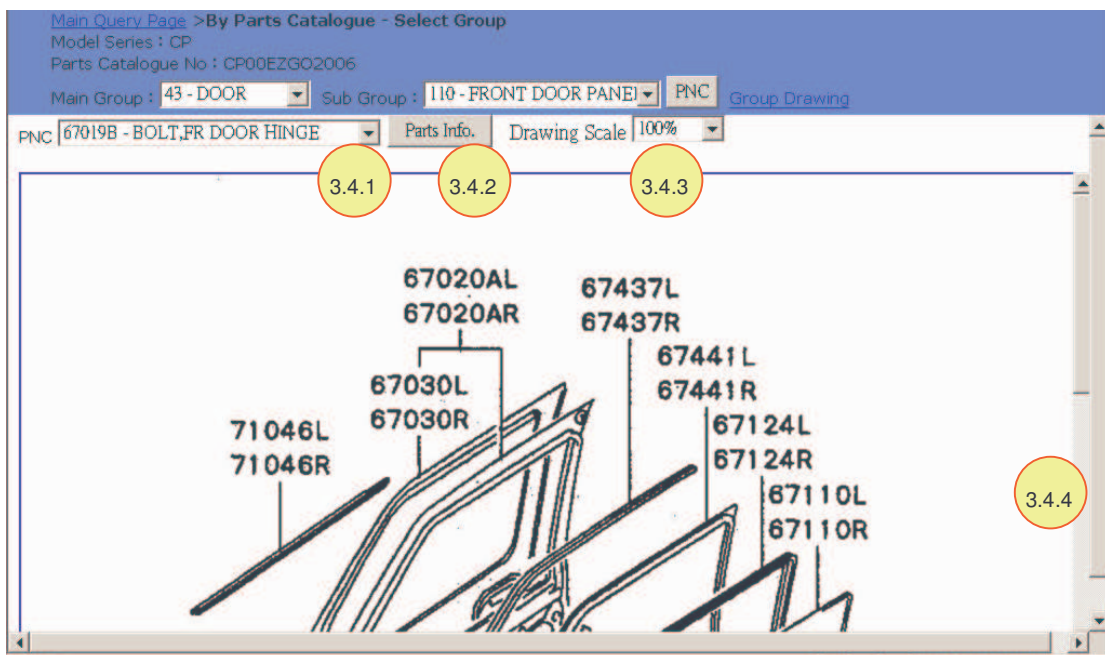

Click on ”Parts info.” bottom, then you get the part number you want.

### 4.4.3

Draw the scroll of “Drawing Scale ” to arrange the size of illustration on the screen.

### 4.4.4

When the illustration was showed a proper size to view, you can use the side scroll on the screen to change the views.

PIC 4

## 4.5

Get part number and other relative information :

### 4.5.1

According to entering engine number for query, you will get the part number and relative information as shown PIC 5.

### 4.5.2

According to be chosen model code for query, you will get the part number and relative information as shown PIC 5.

### 4.5.3

According to be chosen parts catalogue for query, you will get the part number and relative information as shown PIC 5.

The screenshot displays a parts catalogue interface with a technical drawing of an engine cylinder head assembly. The drawing includes labels for various parts: 01200AA (the main assembly), 01296 (bolts), 01282P (washers), 10093C (nuts), and 10113 (nuts). Three browser windows are overlaid on the interface, each showing search results for a specific query:

- 3.5.1** (Microsoft Internet Explorer):  
Model Series : CP  
Parts Catalogue No : CP0EXP002004  
Group No : 11 120  
PNC No : 01200A PNC Name : HEAD ASSY,ENG CYLINDER  
Table:

Parts No	KD	QTY	From	To	Replacement Parts	Remark
CW739722	D	1.0	20040210	99991230		
- 3.5.2** (Microsoft Internet Explorer):  
Model Series : CP  
Parts Catalogue No : CP0EXP002004  
Group No : 42 310  
PNC No : 63227L PNC Name : PANEL,QTR,INR LH  
Table:

Parts No	KD	QTY	From	To	Replacement Parts	Remark
CW651903	D	1.0	20030703	20031014

## 5.FAQs

---

### 5.1 Where can I find the engine number?

1. In general, engine number was pressed on the engine. For CM/CP, The position of the engine number was shown the picture below. According to this picture, you will easy to find the engine number.

If we realized the rough engine number position, we can keep follow the steps below to find an engine number from a vehicle.

Step 1. Stand by the left side of the vehicle.

Step 2. Squat down and look inside. We can find the plate shown as the picture below. In general, the plate was covered by dust.

Step 3. Get a close look and read the number on the plate. Write down this engine number and use it to pick part number from the website system. We hope you use machine raise the vehicle up. Then, to find an engine number becomes easy.

2.The car retailers usually have a record list. The information also can tell you about the engine number.

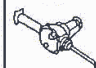

5.2 I need a service part, but can't find in the illustration of the website system.

1. We recommend that you prepare the information below:
  - a. Engine number
  - b. Take a picture about broken part picture that you want to replace.
  - c. PNC, if you know.
  - d. Describe the install position of the part. (If you have picture better)
2. Send the information to us. Our e-mail: [brown@china-motor.com](mailto:brown@china-motor.com)  
CMC will reply your question ASAP.

## 6.Index

### 6.1 Main group illustration index

This illustration is so clearly that you can easy to find main group.
